

Banco de Dados Não Relacional

Atividade Prática – Aula 8 | Monitoramento, Backup e Segurança no MongoDB

EXERCÍCIO 1 – Criar usuário devAdm com acesso apenas de leitura

Script: db.createUser com role 'read' no banco clima_alerta.

```
>_MONGOSH
> use clima_alerta

db.createUser({
  user: "devAdm",
  pwd: "123456",
  roles: [
    { role: "read", db: "clima_alerta" }
  ]
})
< switched to db clima_alerta
> mongosh -u devAdm -p 123456 --authenticationDatabase clima_alerta
❌ > SyntaxError: Missing semicolon. (1:10)

> 1 | mongosh -u devAdm -p 123456 --authenticationDatabase clima_alerta
    |      ^
clima_alerta>
```

```
>_MONGOSH
db.createUser({
  user: "devAdm",
  pwd: "123456",
  roles: [
    { role: "read", db: "clima_alerta" }
  ]
})
< switched to db clima_alerta
> mongosh -u devAdm -p 123456 --authenticationDatabase clima_alerta
❌ > SyntaxError: Missing semicolon. (1:10)

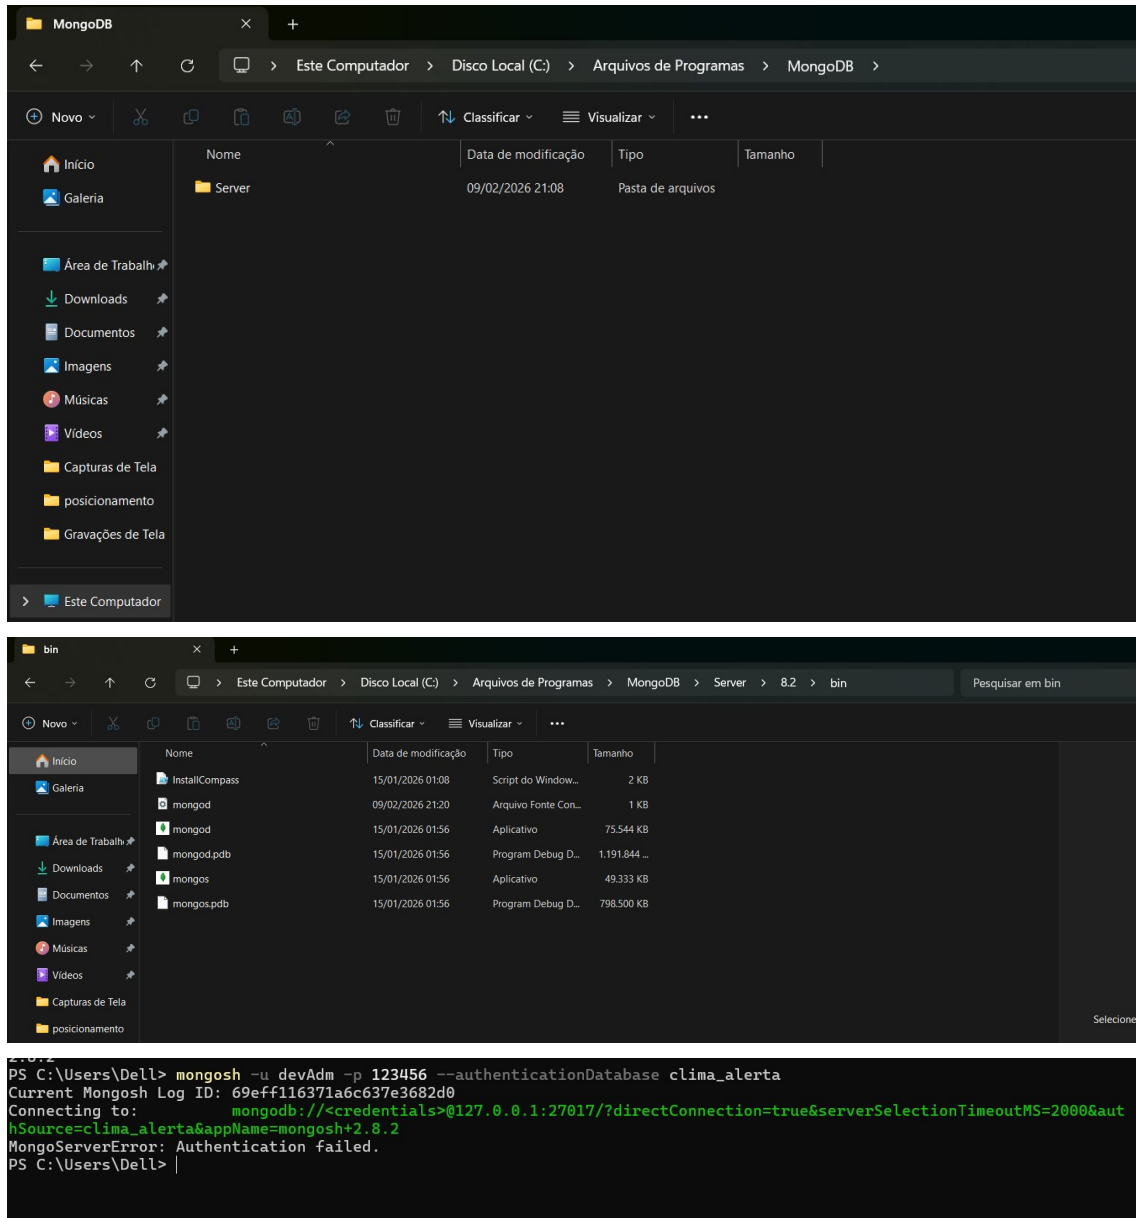

> 1 | mongosh -u devAdm -p 123456 --authenticationDatabase clima_alerta
    |      ^
> mongosh -u devAdm -p 123456 --authenticationDatabase clima_alerta;
❌ > SyntaxError: Missing semicolon. (1:10)

> 1 | mongosh -u devAdm -p 123456 --authenticationDatabase clima_alerta;
    |      ^
> mongosh -u; devAdm -p 123456 --authenticationDatabase clima_alerta
❌ > SyntaxError: Missing semicolon. (1:21)

> 1 | mongosh -u; devAdm -p 123456 --authenticationDatabase clima_alerta
    |      ^
> exit
❌ > MongoshUnimplementedError: [COMMON-90002] the exit/quit commands are not supported
> db.auth("devAdm", "123456")
❌ > MongoServerError[AuthenticationFailed]: Authentication failed.
clima_alerta>
```

EXERCÍCIO 2 – Conectar ao banco usando o usuário devAdm

Tentativas de conexão via mongosh com autenticação pelo usuário devAdm.

EXERCÍCIO 3 – Exportar a coleção leituras em formato JSON

Comando mongoexport exportando a coleção leituras para leituras.json.

```
clima_alerta> db.createUser({
|   user: "devAdm",
|   pwd: "123456",
|   roles: [
|     { role: "read", db: "clima_alerta" }
|   ]
| })
{ ok: 1 }
clima_alerta> |
```

EXERCÍCIO 4 – Deletar a coleção e restaurar a partir do arquivo JSON

Drop da coleção leituras e restauração via mongoimport.

```
clima_alerta> db.createUser({
  user: "devAdm",
  pwd: "123456",
  roles: [
    { role: "read", db: "clima_alerta" }
  ]
})
{ ok: 1 }
clima_alerta> db.auth("devAdm", "123456")
{ ok: 1 }
clima_alerta> exit
PS C:\Users\Dell> mongosh -u devAdm -p 123456 --authenticationDatabase clima_alerta
Current Mongosh Log ID: 69eff1ab6ac48741ca3682d0
Connecting to:      mongodb://<credentials>@127.0.0.1:27017/?directConnection=true&serverSelectionTimeoutMS=2000&autoSource=clima_alerta&appName=mongosh+2.8.2
Using MongoDB:      8.2.4
Using Mongosh:      2.8.2

For mongosh info see: https://www.mongodb.com/docs/mongosh-shell/

-----
The server generated these startup warnings when booting
2026-04-27T19:00:20.486-03:00: Access control is not enabled for the database. Read and write access to data and configuration is unrestricted

```

EXERCÍCIO 5 – Testar a conexão com Mongoose e capturar logs

Importação da coleção via mongoimport com autenticação do usuário devAdm, verificando logs de conexão e resultado.

```
test> use clima_alerta
|
| db.leituras.drop()
switched to db clima_alerta
clima_alerta> db.leituras.drop()
true
clima_alerta> |
```
